Eliza Hamilton

Software Engineer & Automation Engineer

(206) 898-6765 · etj2206@rit.edu · Lake Forest Park, WA · jeanmachine.dev

Software engineer and automation engineer experienced in business-process tooling, embedded-device validation, Linux infrastructure, data systems, and production test software. Works across TypeScript, PowerShell, Python/Bash, C#, SQL, Rust, Microsoft Power Platform, Ansible, and Docker. Delivered a 10x manufacturing test-speed improvement at Corning and supported 100+ test suites per session across approximately 25 physical devices at Intel.

TECHNICAL SKILLS

Languages: Python, Bash, PowerShell, TypeScript, C#, C/C++, Rust, Java, SQL, PHP, HTML/CSS

Automation & data: Power Automate, PowerApps, Power BI, Microsoft Dataverse, Microsoft SQL, PostgreSQL, LabVIEW, Just

Infrastructure & validation: Linux/Ubuntu, Ansible, Docker, ADB, SSH, CPU consoles, WSL, VNC/NoMachine, Git/Forgejo, Chromebook SoC validation, OS and firmware deployment

Web & analysis: Svelte, React, AngularJS; academic use of scikit-learn, pandas and NumPy

EXPERIENCE

Jensen Hughes — Automation Engineer *January 2026 – Present*

Seattle, WA

- Develop business automation and business-intelligence systems across PowerApps, Power Automate, and Power BI for marketing operations, working with Microsoft Dataverse and Microsoft SQL datasets.
- Write TypeScript and PowerShell automation supporting Microsoft 365 workflows and operational data processes.
- Built compact Power Automate flow-outline, single-action inspection, and surgical graph/shorthand patching tools with WDL expression and reference validation; verified behavior with offline tests and hosted smoke checks.
- Prototyping an s-expression interface for authoring Power Automate workflows without relying on the visual editor.

Intel (UST Global) — Validation Tester II *August 2025 – January 2026*

Santa Clara, CA

- Supported Chromebook SoC validation across approximately 25 physical devices, running condition-specific suites of more than 100 smoke tests per session.
- Ran and made targeted modifications to Python and Bash test scripts covering WebGL, application performance, streamed APK installs, firmware settings, and NPU testing.
- Co-developed the team’s Ansible setup system, contributing playbooks, Ubuntu host configuration, and remote firmware deployment; deployed OS images manually.
- Captured failure logs and debugged devices using ADB, SSH, and CPU consoles, including when ADB was unavailable.
- Built Justfile task runners for remote access, proxy setup, and device provisioning; used Docker-based environments for console access, testing, and deployment; maintained internal Forgejo repositories.

EXPERIENCE (CONTINUED)

Xerox Corporation — Software Engineer *September 2022 – December 2022*
Webster, NY

Integrated SQL-backed systems with Power BI to visualize product data for management. Improved C# backend software supporting printer functionality.

Corning Optical Communications — Software Engineer *May 2022 – August 2022*
Hickory, NC

Developed and deployed fiber-optic manufacturing test software in PowerShell and LabVIEW. Integrated PowerShell printer-control scripts into a live LabVIEW production codebase without disrupting manufacturing, improving testing speed 10x. Supported C# and PostgreSQL database upgrades for future products.

Sensored Life — Software Engineer *January 2022 – May 2022*
Rochester, NY

Deployed VTiger CRM company-wide, migrated customer data, integrated the website with the PHP/SQL backend, and configured automated workflows using AngularJS and PHP.

EDUCATION

Rochester Institute of Technology *August 2019 – May 2023*

B.S. Computer Science, Cum Laude

SELECTED PROJECTS

Asa — Persistent Personal Assistant *Python · Discord · SQLite · OMP/Herdr*

Built and operate a modular personal-assistant platform with a live Discord gateway, persistent model sessions, Obsidian-backed memory and task automation, durable request/outbox recovery, scheduled jobs, public Bluesky monitoring, and guarded dynamic tools.

Head Huntress *Personal · Rust · In progress*

LLM-assisted job-assessment and resume-planning tool with an OpenRouter API adapter, asynchronous model requests, and typed JSON response parsing.

Tetroxide *Rust · TUI*

Command-line Tetris clone implementing complete single-player game logic in a terminal interface.

Pokemon Data Mining *Academic · Python · SQL*

Scraped, parsed, and analyzed Smogon data to forecast competitive outcomes using Python, SQL, scikit-learn, pandas, and NumPy.

Personal Website — jeanmachine.dev *Svelte · AT Protocol*

Svelte website with assets stored on AT Protocol and integrations with AT Protocol applications including Leaflet and Bluesky.

COMMUNITY

Active Transportation Advocacy

Advocated at the Washington State legislature and local city council meetings for bike infrastructure, sidewalks, and multimodal transportation; kept neighbors informed about comprehensive-plan updates.
