EXPERIENCE

JENSEN HUGHES

Automation Engineer

Seattle, WA

January 2026 – Present

Deploying business automation systems and business intelligence systems across PowerApps, Power Automate, and Power BI platforms. Utilizing a mix of Microsoft Office suite apps and scripts deployed in TypeScript and PowerShell to automate tasks, as well as working with Microsoft Dataverse and Microsoft SQL platforms for large-scale employee and customer data sets for the marketing team.

INTEL (UST GLOBAL)

Validation Tester II

Santa Clara, CA

August 2025 – January 2026

Deployed OS images to embedded test devices and validated Chromebook SOC functionality. Managed Ubuntu-based host infrastructure via Ansible for reproducible updates. Developed & ran Bash, Python scripts for test automation and deployment. Built Justfile task runners for VNC / NoMachine, proxy, and device provisioning. Worked on devices remotely over SSH, TMUX / Zellij, via WSL. Debugged devices via ADB or SSH through the CPU console when ADB was not available wired or wirelessly. Accessed, started, and automated Docker images for systems to enter CPU consoles, run test scripts, and deployments. Acquired up-to-date Google test software for Chromebooks directly via git, managed custom Forgejo git forges for internal projects.

XEROX CORPORATION

Software Engineer

Webster, NY

September 2022 – December 2022

Integrated backend SQL database systems with PowerBI for data visualization of software products for management to better assess priorities. Worked on improving backend software, built in C#, to improve printer software functionality.

CORNING OPTICAL COMMUNICATIONS

Software Engineer

Hickory, NC

May 2022 – August 2022

Worked on fiber optic testing software deployment and development; upgraded test software in PowerShell, LabView. Integrated PowerShell printer operation scripts into existing LabView production codebase without impacting manufacturing capabilities. Improved testing speed 10x for a live factory environment. Worked in C# and PostgreSQL for internal database upgrades for future products.

SENSORED LIFE

Software Engineer

Rochester, NY January 2022 – May 2022

Deployed a new CRM system, VTiger, company-wide and integrated front-end website systems with new CRM backend in PHP, while migrating customer data and resources. Set up automatic workflows for the new CRM product for company use, integrating AngularJS and PHP frameworks with existing SQL databases.

EDUCATION

Rochester Institute of Technology

B.S Computer Science, Cum Laude

August 2019 – May 2023

Rochester Institute of Technology

B.S Computer Science, Cum Laude

August 2019 – May 2023

SKILLS

Languages: Rust, Python, Java, C#, C/C++, Bash, SQL, PowerShell, PHP, HTML5/CSS

Technologies: Git, Linux, Ansible, Just, Docker, ADB, MacOS, Windows, PostgreSQL, PowerBI, PowerAutomate

Frameworks: Svelte, React

PROJECTS

PERSONAL WEBSITE

A personal website made in Svelte with assets stored on the AT Protocol and integrated with AT Protocol apps like Leaflet and Bluesky.

TETROXIDE

Rust clone of Tetris written for a TUI interface in the command line, implements full Tetris single-player logic.

POKEMON DATA MINING

Large scale data-mining project from university where Smogon data was scraped, parsed, and interpreted to forecast potential future outcomes for competitive scenes in the series. Used Python, SQL / DataGrip, SciKitLearn, Pandas, NumPy, Tensor, and related Python tools for handling large quantities of data and ML processes.

COMMUNITY

ACTIVE TRANSPORTATION ADVOCACY

Involved in promoting multimodal transportation. Advocated at the Washington State legislature for bike infrastructure and attended city council meetings to push for increased funding for sidewalks, bike lanes, and other multimodal enhancements. Actively informed on local developments regarding comprehensive plan updates to local and nearby communities, working on keeping neighbors informed as well.
